

Rokipo

UNIQUE LIQUID SUPPLEMENT FOR OPTIMUM BROILER PERFORMANCE

- Promotes growth
- Improves feed intake
- Stimulates drinking
- Reduces stress
- Results in better meat quality
- Promotes the stomach/intestinal action
- Increases resistance
- Assists the airways

Composition: Extracts of plants, essential oils and bitters

Use and dosage

Use Rokipo with a dosage of 200 ml/day/1000 chickens in the drinking water. Rokipo can be used at any time during fattening whenever growth is disrupted for any reason, but is particularly recommended for:

- Use during the last 10 days of rearing
- Health boost after vaccinating

Cost per Bird:

1 litre of Rokipo will treat 1000 birds for 5 days.

- RRP £5.95 per litre
- Cost per bird 0.595 pence per bird per 5 days' treatment

Economic Benefits:

Trial results to date indicate that an **extra** weight gain of around 200g per bird can be achieved when using Rokipo during rearing. When calculated on a typical price from the processor of about £0.70/kg this would give an extra return of around £0.14/bird. On an average house size of 30,000 birds, this represents an **extra GP of £3900**, after costs

Rokipo has also been shown to improve FCR - when this is factored in a house this size house could potentially also use around £2000 less feed per crop - giving a potential **extra profit per 30,000 crop of around £5900** after allowing for cost of the supplement
